Play Ships and Boats

Fahr Play Ships and Boats are constructed using pre-assembles modular sections that bolt together on site. These modules are fully customizable in the colours, graphics and style that you want for your product range or your particular project and they can be made longer or shorter simply by adding or removing modules to suit your budget or to fit your site.

Emergency Services

Many children want to grow up to be in the Police, Fire or Ambulance Service, but why wait until they grow up! With the Emergency Services products, children can act out their role in the playground.

Sand and Water Play

Children love to play with sand and water, so Fahr have created a range of products specifically for this. The HDPE construction is ideal for these products as it is easy to maintain and will not rot, crack or split like timber products can do in these environments.

Steam Express Train

The Steam Express Train Set products are larger than the Early Years Train Set, making them more suited to an older age range. Featuring a crawl-through tunnel at the front of the Express Train, seating throughout the train and carriages and fun graphics to boost the imaginative play experience.

Early Years Express Train

The Early Years Train Set products are fun and exciting set of modular train and station accessories for the children to play on. Each unit is durably built using high quality materials and unlike most of the competitive products out in the market place, the Early Years Train Set products do not feature any timber, so they will not rot, crack, split or develop splinters, which is very important when early years children are playing on them.

Nessie Play Elements

Nessie Play Elements are a fun themed set of activities for school playgrounds including: seating, climbing, activities, music and storage. The activity sections of Nessie can be specified with almost any of the Fahr Play Panels activities and because Nessie is modular, you can buy what you need now and you can add to it later.

They are designed to be freestanding, but can also be secured to the ground with optional ground anchor lugs if required.

Tunnels

Freestanding crawl thru play tunnels can be used with little or no installation required on site as they are pre-assembled in the factory. This very durable construction, which utilizes two thermo-formed play tunnel halves joined with purpose made aluminium couplings, means that the play tunnels can be specified and manufactured with two different coloured tunnel halves and the option of engraving on the inside or outside of the crawl thru play tunnel panels themselves.

Standard tunnel diameter is 750mm and can be supplied in any length up to 2400mm.

600mm diameter tunnels are also available but only in lengths up to 1200mm.
