

How to design your play area

First of all, **measure the area** you have available in your garden.

The base for the climbing frame needs to be **flat and level**, and ideally should be grass, or with safety surface. **Nothing hard** like stone, paving slabs, concrete, tarmac, patios or decking.

You will need **free space around the tower/s, swings and slide**, called safety area, so children don't hit anything hard if they fall off the equipment.

This needs to be:

- 1.5 - 2.0m around the tower/modules
- 2.00m in front of the slide
- 3.5m in front and to the back of the swing top pole.

You need to provide for this space when you are planning your play area for it to be safe. See diagrams below.

Check the towers and modules dimensions: Details are supplied on our website for each tower/module.

In Blue Rabbit, there are a few different platform heights.

Most towers are: 1.20m and 1.50m, and 2 lengths of slides, **not interchangeable**. In most towers you can choose the platform height. The lower platform has a short slide and the higher platform has a longer slide. On our prices, the slide is also included, but it can be taken out and replaced by the fireman's pole. There is a "no slide" option on every tower. If you don't put another module on the entrance, you will need to either enclose the entrance, otherwise it will be dangerous. Please note that this might not be in the standard instructions.

The Cascade tower can have 0.6m and 0.9m platforms, or 0.9m and 1.2m platforms, with different slide options. But again, each platform height needs a specific length of slide.

There is a great range of towers, modules and accessories to choose from.

PLEASE

NOTE that **some towers can have more than one module at the time**, check with us to see what fits, but we have included a chart below.

The swing module comes without accessories as standard, so you can choose exactly what you would like to hang from it. Such as flat plastic seat, flat rubber seat, wraparound seat, pinewood seat, baby seat, ring trapeze, ladder, knot cord, nest swings, tyre swings etc. The hooks have a clip that makes it easy to exchange accessories.

The Challenger module also comes with a rock wall, a net and a ladder at the end of the swing pole. There are no accessories as standard, the same as the swing module above, so you can choose what you would like.

To combine two towers, you need to use the Bridge module, but only joins towers of the same platform height.

Combinations			@wall	@ramp	@net	@bridge	@swing	@steps	@challenger	@platform	HDPE slides		
			120	120	120	120	x=270 x=740	120	x=270 x=740	120	H=60 H=90 H=120 H=150

There are no accessories as standard with the towers, so you can design your climbing frame with exactly what you would like on them. There is a huge range of accessories such as letter box, telescope, telephone, binoculars, steering wheels of different kinds, flags, blackboards, megaphones, etc.

The Blue Rabbit range is designed as a DIY job. The timber we supply is cut to size, but there will be a small amount of cutting to do while installing. The timber is pressure treated and requires no further treatment unless you wished to change the colour. The timber IS NOT PRE-DRILLED, you need to drill pilot holes whilst installing the play equipment.

The towers come with ground anchors to secure the tower into the ground. They will need concreting in after building the tower on top of the grass or surface.

All items necessary to build the towers, are included in the kit box. This also includes the handles, ground anchors, bolt covers, swing hooks, screws, bolts, etc.

WE CAN PROVIDE PROFESSIONAL INSTALLATION SERVICE IF REQUIRED.

Please have a look at the Installation Service on our website for further details, or contact us for a quote.
